

The subjective experiences of shortwave users near BPL test sites, as well as objective data, is now totally conclusive: BPL will often render shortwave services unusable (commercial, maritime, military, amateur, government). The affected parties have used this portion of the E-M spectrum for 100 years in many cases, providing great value and in some cases facilitating livelihoods. Even limited deployment of BPL would be catastrophic for such users, and I urge the Commission to end the deployments now and redirect broadband resources to more traditional networking media.
